

BEFORE

AFTER

ANGELINA JOLIE

She says: "I haven't had anything done and I don't think I will. But if it makes somebody happy then that's up to them. But I don't plan to do it."
Dr Frankel says: "I believe she's had nasal surgery. Her tip appears to have an operated appearance and the lines that define her nasal side walls suggest surgery as well because they don't widen as they approach the tip. It is important to note that in these photographs there is also make-up that shades the sides and highlights the centre of the nose... the net effect being to narrow the appearance of the nose."

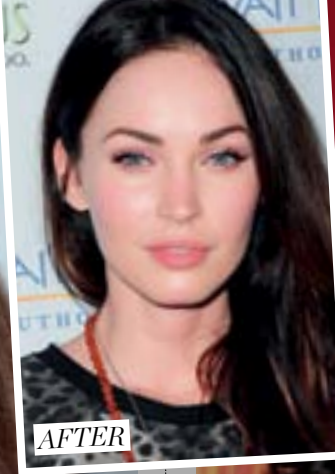

Secret CELEB SURGERY Exposed!

A-list surgeon Dr Andrew Frankel reveals all on star nose jobs

Being talented isn't enough in Hollywood, you also need to have the looks and those looks need to be perfect. And while the odd face lift here, boob there and nip/tuck everywhere is now common place in modern society, there's one cosmetic procedure the stars still choose to deny – the nose job.

Ahlan! talked to Dr Andrew Frankel, surgeon to the stars at The Lasky Clinic in Beverly Hills (www.laskyclinic.com), to help decipher whether these celebs, who've all denied surgery, may have gone under the knife...

BEFORE

MEGAN FOX

She says: "If you feel, 'This is something that I want to do,' then do it. It's amazing that we have the technology to do the stuff that we do."
Dr Frankel says: "It might be that Megan's nose had already been done in the 'before' photo

as there seems to be what we refer to as an 'inverted V' configuration. The 'after' image shows significant changes and all are nice improvements. Her tip is narrowed, the infratip lobule has been rotated and the lines that define the nasal side walls are much better defined."

AFTER

BEFORE

HALLE BERRY

She says: "I hope I'll evolve as a person who realises it's really not about my physical appearance and not be drawn to that seductive knife. I haven't [had surgery]. But that's one thing I'll never say never about, because I don't know."

Dr Frankel says: "The alar base is narrower in the 'after' image and this nose has a characteristic appearance at the tip suggesting there's been some alteration. That's to say there is a ball at the tip or 'unitip' and the part just below the tip (infratip lobule) is hanging."

BEFORE

AFTER

BRITNEY SPEARS

She says: "I think you can be happy with the person on the inside, but on the outside you are always striving for more."
Dr Frankel says: "The more current photo shows

a narrowed tip and it's also more narrowed at the base. There is a small 'break' at the junction between the nasal bones and cartilage that also suggests surgery has been performed."

BEFORE

AFTER

KEIRA KNIGHTLEY

She says: "Plastic surgery is brutal. There's this awful show, *Dr 90210*, that shows people doing plastic surgery and it's brutal. It kind of makes you go, 'Are you all mad?' I couldn't go through with it, I'm not into pain and all that."
Dr Frankel says: "The alar base of Keira's nose is definitely more narrow (where the nostril rims attach to the face) and her tip defining points are also narrower, evidence that she's had a rhinoplasty. As for the width of her nasal pyramid (the bones at the upper third) this also appears narrowed, although only to a small degree. However, Keira's nose does not show typical findings that one would expect after a rhinoplasty so I feel this was very well done."

BLAKE LIVELY

She says: "It's the way you address any rumour. People want to talk. They want to create negative things about you and your life, and make up things."
Dr Frankel says: "Blake's nose is quite a bit different in these two images, suggesting surgery has been done. Her tip is more refined and the nose is narrower with a steeper slope at the sides of her bones. This is a nice improvement."

BEFORE

AFTER

JENNIFER ANISTON

She says: "I had a deviated septum fixed – best thing I ever did. I slept like a baby for the first time in years."
Dr Frankel says: "It does appear that Jennifer's nose has recently been made narrower at the tip as well as along its entire length. The tip also appears rotated a tad. From viewing some other photos of Jennifer when she was younger it is likely that she had an earlier rhinoplasty and that the recent one was a further refinement."

CHRISTINA AGUILERA

She says: "I feel sexier than I've ever been in my whole life."
Dr Frankel says: "The tip of her nose appears to have been rotated (lifted) and narrowed. The noses are very different."
